

Laravel Developer Interview Task [Exp: 1 - 3 Years]

Task Overview:

Project: Simple “ Online Book Store ” (or similar business logic - based app)

The system should allow users to view, search, and manage books along with a basic admin dashboard.

1. UI/UX – Web Design & Development

Design clean and responsive UI using Blade Templates.

Create:

- Home page
- Book listing page
- Book details page
- Admin login/dashboard

2. Laravel Blade & Backend

Build backend using Laravel (latest stable version).

Use proper MVC architecture.

Admin should be able to:

- Add, edit, delete books
- Manage book availability and price

3. MySQL Database

Design a relational database schema for:

- Books
- Users (basic login optional)
- Categories (optional)

4. API Integration

Integrate any one public API, for example:

- Google Books API (fetch book metadata)
- Weather API (for location - based weather on home page)
- Any simple open - source REST API

Display integrated API data in a designated UI section.

Important Notes:

All requirements must be fulfilled in a single Laravel project.

Cloning of existing projects, use of AI - generated code, or template - based solutions is strictly not allowed.

You may use Bootstrap or Tailwind CSS for frontend styling (no UI kits or themes).

Clean code and clear commit history are expected.

Evaluation Criteria:

- UI/UX Design Quality
- Code Structure & Cleanliness
- Proper Use of Laravel Features (Blade, Controllers, Routing, etc.)
- Database Design & Query Usage
- API Integration Accuracy
- Completion within Deadline

Submission Guidelines:

Complete all tasks and submit the project via GitHub/Drive link.

Include setup instructions in a README file.
